Design and Geometry

At the heart of DIN 931 bolts is their specific geometry designed for strength and ease of assembly:

- Hexagon Head: Facilitates torque application with standard wrenches or spanners, providing a secure grip for tightening and loosening.
- Partial Threaded Shank: The threaded portion extends partway along the bolt shank, allowing for precise clamping and load distribution.
- Unthreaded Shoulder (if present): The smooth shank segment can serve as a bearing surface, ensuring proper alignment and reducing stress concentrations.

The bolt's dimensions are meticulously defined to fit standard nuts and washers, promoting compatibility and interchangeability.

Material and Mechanical Properties

DIN 931 bolts are typically manufactured from various steels, including:

- Carbon Steel: Commonly used for general-purpose applications.
- Alloy Steels: For higher strength requirements.
- Stainless Steel: To resist corrosion in harsh environments.

The standard specifies mechanical properties such as:

- Minimum Tensile Strength: Ranges typically from 400 MPa to over 1000 MPa, depending on the grade.
- Yield Strength: Ensuring the bolt can withstand operational loads without permanent deformation.
- Ductility and Toughness: For reliable performance under dynamic loads.

Thread Specifications

DIN 931 bolts feature metric coarse or fine threads, with standard sizes ranging from M5 to M24 or

larger. The thread pitch (distance between threads) is standardized according to the bolt size, ensuring compatibility with nuts conforming to DIN 934 or other similar standards.

The DIN 931 Standard: Detailed Specifications

Dimensional Standards

The DIN 931 standard provides comprehensive tables detailing:

- Nominal Diameter (d): The outer diameter of the threaded portion.
- Thread Length (l): The length of the threaded segment.
- Head Dimensions: Across flats (spanner size), height, and corner radius.
- Shank Length: The unthreaded portion length, which can vary based on bolt size.

For example, a typical M10 bolt under DIN 931 might have:

- d: 10 mm
- Thread Length (l): 20 mm (or as specified)
- Across Flats: 17 mm (standard spanner size)
- Head Height: 9 mm

All these dimensions are designed to ensure compatibility with standard nuts, washers, and tools.
